

ZEROPOINT

LEADER IN SUSTAINABLE
COMPRESSION

2020

ZEROPOINT

THIS IS ZEROPOINT

We want to inspire people to live a healthy and active life. Our compression products offer better performances to all athletes no matter pro or beginner, and support a healthy lifestyle every day.

Zeropoint was founded in 2009 in Finland after years of university level research on compression products and their benefits on performance, recovery and prevention of sports injuries.

Today Zeropoint is a global brand reaching active people around the world.

We take pride in being the official partner to the Finnish Olympic Team.

Our products combine the latest compression technology with sustainability.

When we say compression, we truly mean in. We test it, measure it and constantly improve it.

All Zeropoint products are made with an excellent fit, so that they feel like a second skin.

We think saving the planet is everybody's business, so we do all we can to make a difference.

At the moment 85 % of our clothing is made of recycled materials
and we aim to use 100 % recycled materials by 2021.

Our clothes are designed in Scandinavia and produced in Europe.

Socks are made with expertise in Taiwan.

Live your life to the fullest
- we are here to take you to the next level!

Z E R O P O I N T

LEADER IN SUSTAINABLE COMPRESSION

FOR YOU AND FOR THE PLANET

Our planet's resources are not endless and to be honest, we people haven't been treating the earth with the respect we should have had. Now is the time to act. But life should also be fun and we should be able to enjoy high quality products without any guilt.

That is where we are unique at Zeropoint.

We don't want to create any more waste on the planet. Instead, we support collecting and reusing it. The oceans and landfills are full of abandoned fishing nets, production discards, industrial plastic components and textile scraps.

That material can be collected and given a new life as compression clothing.

The process in which our raw material, ECONYL® yarn is been made, allows to create regenerated yarn keeping the same purity and performance as Nylon coming from fossil raw material.

With ECONYL® yarn, the planets resources are respected and the oceans and landfills cleaned.

For every 10,000 tons of ECONYL® raw material, we will save 70,000 barrels of crude oil, 57,000 tons of CO₂ equivalent emissions and 1,012 thousand GJ of primary energy.

Zeropoint's clothes are made in ECONYL® and as a novelty we are now introducing the world's first ECONYL® compression sock.

We aim to be using 100 % recycled materials in our products by year 2021.

That is how we can say Zeropoint is the best choice for you and for the planet.

Made with 100% Regenerated Nylon

ECONYL®

MAKE COMPRESSION WORK FOR YOU

Using compression during activities and sports will enable you to do that little extra you didn't think was possible: run one more mile, lift one more kilo or do one more rep. Use compression a few hours before and after your activity to warm up and to support recovery.

SPORT

Compression boosts your circulation and lifts up your energy levels. Use compression wear before, during and after sports for best results. Compression can be used in every sport from jogging to triathlon.

BEFORE

Start using your compression wear already an hour or two before the training or performance.

By doing this you will prepare your body for the activity, waking up the muscles, circulation and nervous system.

DURING

Compression wear supports your muscles, removes metabolic waste, brings in fresh oxygen, reduces muscle cramps and improves the accuracy of movement.

AFTER

Keep on wearing the compression wear after the exercise, because scientific research shows significant improvement in recovery when using compression. Compression speeds up the metabolic waste, such as lactic acid, removal, thereby enabling the muscles to recover faster.

TRAVEL / WORK

Compression is also beneficial to people working long days standing or traveling. Lack of movement can result in swollen and tired feet and legs. Using compression will make you feel energized from dusk till dawn.

MEDICAL

Compression can also be used for medical purposes. Use it for instance to speed up sport injury recovery, for lymphatic problems, when pregnant or for bypass surgery recovery.

MEDIUM LEVEL COMPRESSION

Medium compression level in socks and sleeves means 15-20 mmHg compression.

This compression level is designed for everyday training, work, travel, recovery and leisure.

Medium compression shapes the body, feels comfortable and gives all the compression's benefits.

All our Athletic-clothes are made with a medium level compression.

HIGH LEVEL COMPRESSION

High compression level in socks and sleeves means 20 - 30 mmHg compression.

This compression level is designed for shorter time usage, such as one to three hours. High level compression is excellent for intensive workouts, competitions and also prevention and treatment of sports injuries.

All our Performance-clothes are made with a high level compression.

A woman with a toned physique is performing a pull-up on a metal bar in a gym. She is wearing a dark patterned sports bra, black leggings, and bright pink compression sleeves on her arms and legs. The word "WOMEN" is overlaid in large, white, outlined letters across the center of the image. The gym background includes a power rack, weights, and various exercise equipment.

INTENSE 2.0 series of products combine cutting-edge technical features, high-quality materials, precisely targeted details and optimized compression. Graduated compression with air flow knit for moisture management. Intense socks, calfs and sleeves are created for exercise, high performance and recovery. They are also perfect for treatment and prevention of sport-related injuries.

Whether you use calf sleeves or socks during your activity is a matter of preference. Combining the calf sleeve and a pair of ankle sock for example, will have the same effect as wearing one of our compression socks, however giving more room for individual variations in sizing. Socks with reinforced heel and toe areas. Anatomical fits in unisex styles.

EERO. ETTALA SIGNATURE SOCK

Eero Ettala Signature Medium Compression Socks

50% Merino Wool / 25% Nylon / 25% Lycra

art.no. EAS19LTD

In collaboration with Eero Ettala comes a long-awaited new version of the sock that has become a signum of the legend in the snowboarding and skating world. A merino wool medium compression sock with characteristic retro stripes. Airflow knitting together with the merion wool makes this a multi climate product with optimal thermal balance. Naturally anti-bacterial. Reinforced heel and toe areas. Unisex fit.

High Compression Sock

COMPRESSION LEVEL 20-30 mmHg
Fabric: 75% Nylon / 25% Lycra

Black art. no. TCSB2017 Blue art. no. TCSBL2017 Green art. no. TCSG2017 Red art. no. TCSR2017 Yellow art. no. TCSY2017 White art. no. TCSW2017

Team Compression Socks are created for training, high performance and recovery. The sock combines cutting-edge technical features, high quality materials, precisely focused knitting and optimized compression. The compression is graded between 20-30 mmHg, which contributes to increased blood flow, faster recovery and better stability.

Reduces the risk of muscle cramps. They are also perfect for treatment and prevention of sports injuries. The sock has soft and reinforced toe and heel areas for increased durability and comfort. Foot sole also has silicone details to reduce the movement between sock and insole. Anatomical knit. Unisex style.

Team Arm Sleeves has a high compression level and a sleek design. This makes it an excellent choice for intense and physically demanding sports. The sleeve has a comfortable fit and flex top band which keeps the sleeve comfortably in place. Many athletes and exercise enthusiasts also use the arm

sleeve prevent and treat sports injuries. Air ventilation knitting combined with padded protection knit areas create optimal movement and protects your skin from abrasions. Each product contains a pair of armsleeves. Sizing is unisex.

ZEROPOINT SIZE CHARTS

You can find the right size for your Zeropoint compression shorts and tights in the chart.
Please note, that sizing is built to optimize the effect of compression.
If you however appreciate a slightly more loose fit, you can go one size up from your usual size.
